

I-NEED Platform - Production Level Project Plan

Project Overview

The I-NEED platform is a two-sided marketplace application consisting of a Customer App and a Provider App built using Flutter, with a Python-based backend. This document outlines the full 3-month production-level development roadmap, architecture, and deployment strategy.

Technology Stack

- Mobile Applications: Flutter (Single codebase with flavors for Customer & Provider)
- Backend: Python (FastAPI recommended)
- Database: PostgreSQL
- Caching: Redis
- Notifications: Firebase Cloud Messaging
- Deployment: AWS / DigitalOcean with Docker

3-Month Development Roadmap

Month 1 - Foundation	Architecture design, Auth system, DB schema, Flutter setup
Month 2 - Core Marketplace	Service module, Booking lifecycle, Notifications, Payments
Month 3 - Production Hardening	Advanced features, Testing, Optimization, Deployment, Launch

Core Modules

- Authentication & Role Management (Customer, Provider, Admin)
- Service & Category Management
- Booking Lifecycle System (Pending → Accepted → In Progress → Completed)
- Real-time Notifications
- Payment Integration & Commission Logic
- Ratings & Reviews System
- Admin Panel for Platform Control

Production Security Measures

- JWT Authentication with Refresh Tokens

- HTTPS Enforcement
- Role-Based Access Control
- Database Indexing & Query Optimization
- Rate Limiting & Input Validation
- Error Logging & Monitoring

Conclusion

This 12-week roadmap ensures a scalable, secure, and production-ready two-sided marketplace platform. With proper sprint execution and monitoring, the system will be fully deployable and ready for live users at the end of the development cycle.
